Lake Dockery 2020
REEL FACTS
Ryan Jones – Fisheries Biologist
Ryan.Jones@wfp.ms.gov (601) 859-3421

General Information: Lake Dockery is a 44 acre lake, owned and operated by the city of Byram. The lake was renovated in 2010. It is part of the MDWFP Community Fishing Assistance Program (CFAP), providing fishing opportunities in an urban setting.

Location: Approximately ½ mile off Siwell Rd. in Byram, MS
Fishery Management: Largemouth Bass, bream, crappie, and catfish
Purchase a Fishing License: [https://www.ms.gov/mdwfp/hunting_fishing/](https://www.ms.gov/mdwfp/hunting_fishing/)

Regulations
- Rod and reel or pole fishing is allowed. No trotlines, FFFD's, jugs, yo-yo's, limblines, throwlines, or set hooks are allowed.
- Sport fishing licenses are required except on designated days during National Fishing and Boating Week.
- Gasoline powered motors are prohibited. Only electric trolling motors may be used.
- Lake Dockery is open from 30 minutes before dawn to 30 minutes before sunset.

Fishing Tips
- **Bream**
  - Fish crickets, red wigglers, and wax worms in shallow areas during late spring and summer.
- **Catfish**
  - Try tightlining liver or blood scented bait along the dam and water control structure.
- **Crappie**
  - Target brush and laydowns in the middle of the lake with jigs and minnows. The water control structure is another popular spot.
- **Largemouth Bass**
  - Fish around brush and trees with junebug or green pumpkin colored soft plastics. Topwater baits and soft stick baits are good choices around lily pads.
Above: Length distribution for Largemouth Bass collected during 2019 fall electrofishing. Catch rates were low for 2019 with 4-5 inch and 8-10 inch Largemouth making up the bulk of the sample.

Below: Length distributions for Bluegill sunfish collected during 2019 fall electrofishing. One-inch bluegill made up over 60% of the sample.
Above: Results from the 2019 fall electrofishing survey conducted at Lake Dockery. Electrofishing catch rates were low in Lake Dockery but length distributions suggest an overabundance of small Largemouth Bass. Anglers are encouraged to keep their catch of bass up to the five-fish limit.

Above: Trail cameras were used at Lake Dockery to track angler usage before (pre) and after (post) a fishing incentive program was initiated. Game cameras were used to count anglers for an entire year to determine the baseline fishing pressure. At the beginning of the second year of the study, biologists tagged 100 fish in Lake Dockery with numbered tags. Each tag had a specific prize associated with it. Anglers who caught a tagged fish, were instructed to bring the tag to the Jackson office to claim their prize. The incentive program was publicized with press releases and signs posted at the lake. Based on fishing effort, the program was unsuccessful at increasing angler participation on the lake.
